

Model QmB IP40

Quantim® Series

Coriolis Mass Flow

Low Flow Coriolis Mass Flow Measurement and Control

Overview

Brooks Instrument's Quantim® Series is the smallest, lowest flow Coriolis meter and controller available on the market. With a footprint the size of a handheld organizer, you can fit this instrument into any tight space. The heart of the device is a patented Coriolis sensor design which measures low flows independent of the fluid type or process variables. With a range of 0.001 to more than 27 kg/hr, you can measure mass or volume flow and density or temperature all in one compact package. Quantim offers unsurpassed accuracy and unmatched zero stability in demanding low flow applications.

Most critical processes require control as well as measurement, and Quantim offers an optional integrally mounted, in-line control valve. No remote electronics are required as all the transmitting and control electronics are contained within the product housing. A remote valve configuration is also available.

Available with a variety of options and global approvals the Brooks Quantim Coriolis mass flow meters and controllers provide unsurpassed performance, solving specific challenges in demanding low-flow applications.

Product Description

The Quantim family of Coriolis mass flow meters and flow controllers uses a proven mass flow measurement technology to provide direct mass flow measurement and control of liquids and gases that has been employed in a wide variety of markets and applications for more than 15 years. Brooks Quantim products are the smallest and lowest flow Coriolis mass flow meters and controllers available on the market. Coriolis mass flow devices have the option of using an integrally mounted or remote control valve in a miniaturized configuration. They can simultaneously measure mass or volumetric flow and fluid density or temperature.

Product Description

Precision for Even the Most Delicate or Lowest-Flow Processes

Quantim's Coriolis technology allows for precise, direct mass measurement even for very low flow processes. This technology enables for measurement accuracies within 0.2% of the rate for stainless steel construction and 0.5% of the rate for Alloy C-22 construction. Quantim is the lowest Coriolis flow controller available. The configuration with the lowest flow capability allows for measurement down to 0.001 kg/hr, which is perfect for extremely sensitive processes and costly components in any setting.

Process Flexibility

The Coriolis Effect is the deflection of moving objects with respect to a reference point, utilizing this effect allows measurement of flow while negating the need for calibration to a specific fluid or process conditions. The Coriolis technology gives Quantim its industry-leading accuracy, and allows the direct measurement of mass flow. This allows Quantim to transition between process fluids without the need for recalibration, assuming the fluid change doesn't fall out of specification for the valve assembly.

Material Selection for Any Application

Quantim has material options to allow the best possible match for your needs. Quantim offers both stainless steel and Hastelloy as materials for sensor construction. This accommodates for processes with more corrosive fluids, and reduces maintenance due to corrosion of the mass flow meter/controller. Even more variety can be found in seal choices. Customers have the choice of using Viton® fluoroelastomer, Buna, Kalrez®, EPDM, and Nickel as their seals.

Enclosures to Meet Any Need

Different enclosure types enable equipment to be installed in any environment from an indoor non-hazardous area to an outdoor explosion risk area. Quantim is available in four different enclosure types. The IP40 is a basic enclosure, desired for most enclosed environments. IP66 is weather/waterproof, as well as Class 1, Division 2, Zone 2 certified for hazardous locations. The IP66XP is Division 1, Zone 1 certified for explosive environments. No matter the environment, Quantim can be tailored to fit your needs.

Features and Benefits

Features	Benefits
Integrated sensor, valve and PID control all in one small package	Simplifies purchase, installation, and start up by having everything available from one supplier in a single compact unit
Low mass tube drive and optical sensing	Enables accuracy at extreme low flow
Multivariable outputs and true mass measurement	Improves and simplifies process monitoring and diagnostics, further reducing cost of ownership
Diagnostic alarms and warnings	Provides early indication of potential process issues so preventative actions can be taken
Industry leading mass flow measurement precision	Process chemistry and/or process conditions can be altered without the need to change or recalibrate the measurement system, providing the user with maximum flexibility
No internal moving parts	Minimizes maintenance requirements and overall cost of ownership
Small physical size	Easily integrated into most intricate process systems
Gas and liquid measurement and control capability in one package	The ultimate in process flexibility
Variety of options, enclosure types and area classifications available	The right product for your application

Features and Benefits

Diagnostic Alarms and Warnings

- Provides early indication of potential process issues for preventative action

User Interface

- Easy installation, start-up, and operation

Advanced Electronics

- Integrated PID control with superior signal filtering

Optical Sensor

- Allows precise measurement of tube movement for direct mass flow measurement

Tube Assembly

- Varied sizing allows for up to 27 kg/hr of flow

Coplanar Valve

- Super-fast response times (<400 msec typical)
- Minimum valve leak-by (<0.2% FS)

Liquid or Gas Connections

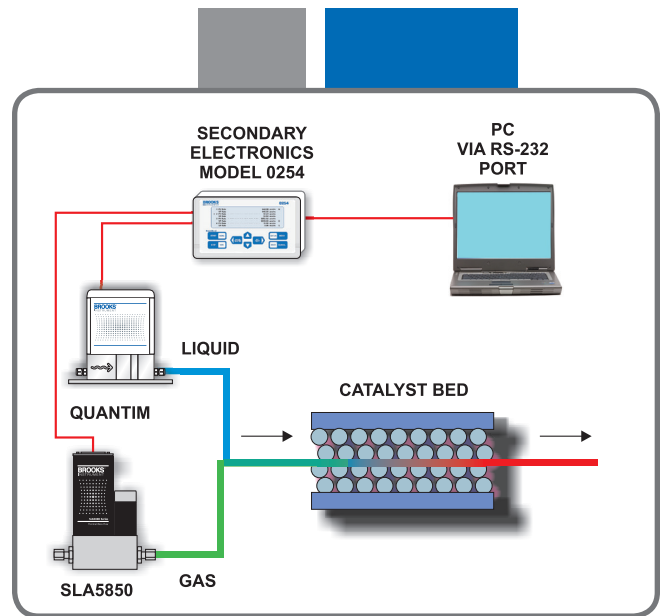

- Seals are available in Viton®, Kalrez®, Buna, EPDM and Nickel
- Flow-thru or Downported Configurations

Product Applications

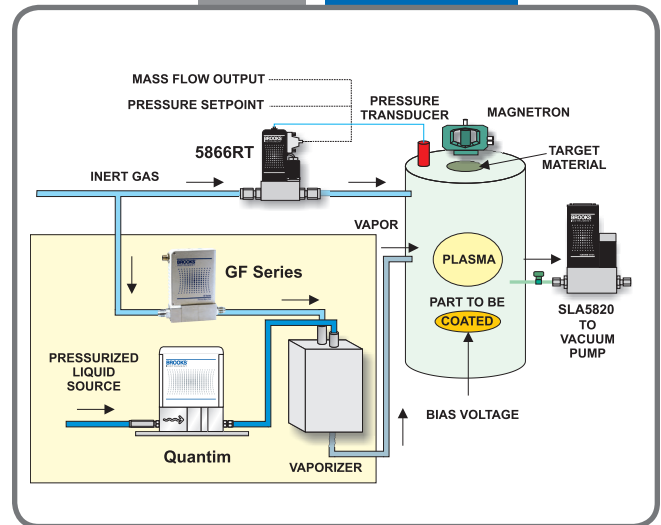

Catalyst Research

The Quantim coriolis mass flow controllers have been selected by many companies participating in catalyst research due to the precise measurement requirements for accurately calculated conversion rate and selectivity, which allows for successful scaling up of processes. Quantim is preferred due to its exceptional precision, wide dynamic range, and super stability. The coriolis technology within Quantim makes them extremely well suited for critical measurements where the composition or thermal properties of feeds vary. It is also available for extremely high pressure service, with appropriate area classifications, and wetted materials.

Vacuum Process

Brooks offers many exceptionally performing products for CVD, ALD, etch, diffusion, and other vacuum operations. The Quantim coriolis mass flow controller provides precision, accuracy, and repeatability for liquid precursor applications.

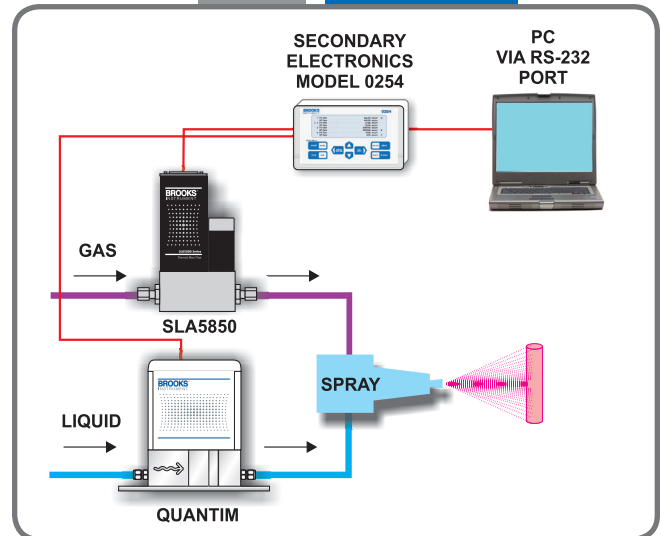

Precision Coating

Many coating processes use liquids that are sprayed onto substrates. The liquid delivery rate to the spray nozzles controls the film thickness on the substrate, while gas flow determines droplet size and spray pattern.

The Quantim mass flow controller is perfect for controlling the liquid flow rate to the spray nozzle. In addition, the instantaneous density output available from the Quantim Series can be employed diagnostically to detect the presence of gas bubbles in the liquid stream.

The Brooks Model 0254 secondary electronics may be used to provide power, local display, and setpoint for both flow devices. The liquid density measurement, used for quality control, is also displayed. A totalizer function may be used to track liquid inventory to ensure that the process supply does not run low.

Ratings

Operating Temperature Range:	0 to 60°C
-------------------------------------	-----------

Temperature Accuracy:	$\pm 0.5^\circ\text{C}$
------------------------------	-------------------------

Differential Pressure Range:	Liquid: 10 to 200 psi
	Gas: 10 to 150 psi

Density Range:	0 to 0.3 and 0.5 to 2.0 g/cc
-----------------------	------------------------------

Density Accuracy:	± 0.005 g/cc
--------------------------	------------------

Maximum Operating Pressure:	
Standard:	500 psi
Optional:	1500 psi
Optional:	4500 psi

Leak Integrity (external):	Elastomer: Outboard 1×10^{-9} atm. cc/sec., helium (max)
	Metal Seal: 1×10^{-10} atm. cc/sec., helium (max)

Mechanical

Materials of Construction	
Process Wetted:	316L, 316L VAR, High alloy ferritic stainless and 17-7PH
Optional:	Alloy C-22 sensor tube
Process Seals:	Elastomer Seal: Viton® fluoroelastomers, Buna, Kalrez or EPDM
	Metal Seal: stainless steel and nickel

Housing:	IP40: polyurethane painted aluminum
	IP66: polyurethane painted aluminum
	IP66XP: aluminum

Inlet Filter:	Tube size 2 controller: 1 micron or 10 micron inlet filter recommended
	Tube size 3 or 4: 10, 20, 30 & 40 micron filters available

Weight:	Housing IP40: 1.6 kg or 3.5 lbs.
	Housing IP66: 1.9 kg or 4.2 lbs.
	Housing IP66XP: 24 kg or 52 lbs.

Moisture Content:	Purged to exhaust dew point less than -40°C (-40°F) prior to shipment to remove calibration liquid, to prevent process contamination. Then vacuum bagged at ambient room conditions.
--------------------------	--

Process Fitting Options:	1/16", 1/8", 1/4" or 6mm tube compression, VCR, VCO or NPT(F), 3.2 mm UPG, Downport ANSI/ISA 76.00.02 (See Model Code)
---------------------------------	--

Electrical Connections:	IP40: 15 pin D-Type connector (See Figure 3).
	IP66: Unpluggable Terminal Block 28-16 Awg.
	IP66XP: 3/4" NPT wiring access to IP40 device with 15 pin D-Type connector.

Dimensions:	(See Figures 1 through 7)

Product Specifications

Notes

- ⁽¹⁾ The nominal flow rate is the flow rate at which water at reference conditions causes approximately 1 bar of pressure drop or the laminar to turbulent transition flow whichever is lower. Maximum flow rate is twice nominal flow rate or the laminar to turbulent transition flow whichever is lower.
- ⁽²⁾ Standard volumetric conditions are 14.696 psia and 70°F.
- ⁽³⁾ Actual volumetric flow is a function of the mass flow and the density measurements; therefore the accuracy of actual volumetric flow is a function of the mass flow and density accuracy.
- ⁽⁴⁾ Accuracy includes combined repeatability, linearity, and hysteresis. Specifications are based on reference test conditions of water/nitrogen at 68 to 77°F (20 to 25°C) and 15 to 30 psig (1 to 2 bar).
- ⁽⁵⁾ Differential pressures are based on reference conditions of water and air at 68 to 77°F (20 to 25°C).
- ⁽⁶⁾ The density measurement at temperatures other than 21°C (70°F) has an additional error of approximately 0.0005 grams/cc per °C.
- ⁽⁷⁾ A temperature rise of up to 20°C (68°F) from internal heating can occur in an open environment where ambient temperature is 23°C (73°F). The device temperature is affected by the ambient and process temperature as well as warming when the device is powered. The device should be maintained in the specified temperature range at all times.

Brooks Service and Support

Brooks is committed to assuring all of our customers receive the ideal flow solution for their application, along with outstanding service and support to back it up. We operate first class repair facilities located around the world to provide rapid response and support. Each location utilizes primary standard calibration equipment to ensure accuracy and reliability for repairs and recalibration and is certified by our local Weights and Measures Authorities and traceable to the relevant International Standards. Visit www.BrooksInstrument.com to locate the service location nearest to you.

START-UP SERVICE AND IN-SITU CALIBRATION

Brooks Instrument can provide start-up service prior to operation when required. For some process applications, where ISO-9001 Quality Certification is important, it is mandatory to verify and/or (re)calibrate the products periodically. In many cases this service can be provided under in-situ conditions, and the results will be traceable to the relevant international quality standards.

SEMINARS AND TRAINING

Brooks Instrument can provide seminars and dedicated training to engineers, end users, and maintenance persons. Please contact your nearest sales representative for more details.

Due to Brooks Instrument's commitment to continuous improvement of our products, all specifications are subject to change without notice.
